

Passware Password Recovery Kit Enterprise v.9.3

Reduce time spent on recovering passwords and get more control over corporate security.

Passware Inc., has combined all its proven password recovery tools and encryption detection technology in an all-in-one user interface to provide system administrators and IT professionals with the complete solution for password-related issues.

Passware Kit Enterprise includes over 30 password recovery tools and Encryption Analyzer Professional to provide immediate password recovery for any and all protected files detected on a PC or over the network while scanning.

It recovers or resets more than 150 different types of passwords. Many types of passwords are recovered or

reset instantly, and advanced acceleration methods are used to recover difficult passwords.

Passware Kit Enterprise introduces a new attacks editor, which sets up the password recovery process in the most precise way to provide the quickest decryption solution possible.

Efficient use of multi-core processors and multi-CPU systems, 3 new and 7 updated password recovery attacks, nVidia GPU and TACC acceleration – all contribute to the improved decryption performance.

Features	Benefits
All-in-one password recovery for 150+ file formats	Recover all types of passwords for almost any file
Integrated Encryption Analyzer Pro scans computers for password-protected items	No encrypted file on a PC or over the network is skipped
Resets passwords for Local and Domain Windows Administrators	Get Administrative access to any computer in minutes
Instant online decryption of Word/Excel files up to version 2003	Unprotect important documents immediately
Multi-core CPUs support	Reduce time spent on recovering difficult passwords
GPU and Tableau TACC hardware accelerator support	
Basic password recovery attacks: Dictionary, Xieve, Brute-force, Known Password/Part, Previous Passwords	Set up the password recovery process in the most precise way
Password modifiers supported (case changes, reversed words, etc.)	
Combination of attacks for passwords like "strong123password"	Optimize the recovery process for frequent password formats
Wizard for easy setup of password recovery attacks	Easy setup of the password recovery process if any information about the password is known

System Requirements

- MS Vista/2003/XP/2000
- Intel Pentium III or higher compatible CPU
