

Passware Search Index Examiner v.1.0

Retrieve electronic evidence in a matter of minutes from a Windows Desktop Search Database

Passware, Inc. developed a new technology that allows computer forensics to access system data indexes on all Microsoft platforms, including Windows Vista. The technology can successfully recover data that, so far, has been hidden from forensic investigators.

Passware Search Index Examiner is an easy-to-use data discovery tool that makes all the items indexed by Windows Desktop Search instantly accessible to computer forensics and IT professionals.

Search Index Examiner lists all the documents, emails, spreadsheets as well as provides creation and modification dates, author, recipients, summary

content, and other information for each item. The only data required from the target computer – is a Windows Desktop Search database.

As Search Index Examiner analyzes Windows Desktop Search database, instead of the original file system, it may discover emails and documents which have been deleted or are no longer available.

With a processing time under 10 minutes for a typical PC, computer forensics will find it easy and quick to retrieve electronic evidence.

Features	Benefits
Processing time under 10 minutes for an average PC	The quickest way to discover electronic data on a PC
Lists all the emails, documents, spreadsheets, and other items indexed by Windows Desktop Search	Find documents relevant to a case
Retrieves item properties: creation and modification dates, author, recipients, and summary content	See preview of important files
The only file required from the target PC is a Windows Desktop Search Database (.EDB)	Perform evidence discovery processes on any PC
Analyzes Windows Desktop Search database, instead of the original file system	See preview of files and items, which have been deleted
Saves reports in common formats: XML, Comma Separated Values (.CSV)	Generate reports for a case
Wizard interface	Easy to use

System Requirements

- MS Windows Vista/2003/XP, 32 or 64 bit
- Intel Pentium III or higher compatible CPU
- 64 MB RAM
- .NET Framework 2.0
